

SAFE CYLINDER CHECK

If any of the above defects are found, **DO NOT USE**, quarantine the cylinder, and report it.

Valves

Check for damaged threads

Check if the Residual Pressure Device (RPD) is present in the valve.

Check the valve handles for tool markings. A properly working valve should not require the use of spanners or other tools to open or close.

Body

Check the body of the cylinder for:

Bulges

Dents

Burn marks

Physical/
mechanical
damage and
cracks

Check the stamp on the cylinder to ensure its still within its test date.
